

Appendix 1-A

Summary of Basic HTML Codes

1. Document Codes:

<code><!DOCTYPE html></code>	identifies the document type as HTML 5.
<code><html>...</html></code>	defines the protocol of the page
<code><head>...</head></code>	defines the head area
<code><title>...</title></code>	contains the title
<code><body>...</body></code>	defines the body area
<code><!-- ... --></code>	comment (use only 2 hyphens here)

2. Text Codes:

a. Text Spacing

<code><p>...</p></code>	paragraph
<code>align="left center right justify"></code>	
<code>
</code>	line break
<code><center>...</center></code>	centre (deprecated in HTML 5)
<code><hr></code>	horizontal rule
<code><blockquote>...</blockquote></code>	indents text from the left and right margins.

b. Headings

<code><h1>...</h1></code>	level 1 heading
<code><h2>...</h2></code>	level 2 heading
<code><h3>...</h3></code>	level 3 heading
<code><h4>...</h4></code>	level 4 heading
<code><h5>...</h5></code>	level 5 heading
<code><h6>...</h6></code>	level 6 heading

c. Text Styles

<code>...</code>	bold
<code>...</code>	strong emphasis (bold)
<code><i>...</i></code>	italics
<code>...</code>	emphasis (italics)
<code><sup>...</sup></code>	superscript
<code><sub>...</sub></code>	subscript

Appendix 1-B

A List of Deprecated and New HTML 5 Tags

This list includes deprecated tags (in gray) and tags that are new in HTML 5 (in red).

WARNING: The following pages are for reference only. You are **strongly advised** NOT to use code until you fully understand how it works.

Tag	Compliance	Description
<code><!--...--></code>		Defines a comment.
<code><!DOCTYPE></code>		Defines the document type.
<code><a></code>		Defines a hyperlink.
<code><abbr></code>		Defines an abbreviation.
<code><acronym></code>	Not supported in HTML 5.	Use the <code><abbr></code> tag instead.
<code><address></code>		Defines an address element.
<code><applet></code>	Not supported in HTML 5.	Use the <code><object></code> tag instead.
<code><area></code>		Defines an area inside an image map.
<code><article></code>	New in HTML 5	Defines an article.
<code><aside></code>	New in HTML 5	Defines content aside from the page content.
<code><audio></code>	New in HTML 5	Defines sound content.
<code></code>		Defines bold text.
<code><base></code>		Defines a base URL for all the links in a page.
<code><basefont></code>	Not supported in HTML 5	Use CSS instead.
<code><bdo></code>		Defines the direction of text display.
<code><big></code>	Not supported in HTML 5	Use CSS instead.
<code><blockquote></code>		Defines a long quotation.
<code><body></code>		Defines the body element.
<code>
</code>		Inserts a single line break.

<code><button></code>		Defines a push button.
<code><canvas></code>		Defines graphics.
<code><caption></code>		Defines a table caption.
<code><center></code>	Not supported in HTML 5	Use CSS instead.
<code><cite></code>		Defines a citation
<code><code></code>		Defines computer code text
<code><col></code>		Defines attributes for table columns
<code><colgroup></code>		Defines groups of table columns
<code><command></code>	New in HTML 5	Defines a command button
<code><datalist></code>		Defines a dropdown list
<code><dd></code>		Defines a definition description.
<code></code>		Defines deleted text.
<code><details></code>		Defines details of an element.
<code><dfn></code>		Defines a definition term.
<code><dir></code>	Not supported in HTML 5.	Use the <code></code> tag instead.
<code><div></code>		Defines a section in a document.
<code><dl></code>		Defines a definition list.
<code><dt></code>		Defines a definition term.
<code></code>		Defines emphasized text.
<code><embed></code>		Defines external interactive content or plugin.
<code><fieldset></code>		Defines a fieldset.
<code><figcaption></code>		Defines the caption of a figure element.
<code><figure></code>		Defines a group of media content, and their caption.
<code></code>	Not supported in HTML 5.	Use CSS to define fonts.
<code><footer></code>		Defines a footer for a section or page.
<code><form></code>		Defines a form.
<code><frame></code>	Not supported in HTML 5.	The <code><frame></code> and <code><frameset></code> tags are not supported in HTML 5 because they have a negative affect to the
<code><frameset></code>	Not supported in HTML 5.	

		usability of a Web page.
<code><h1></code> to <code><h6></code>		Defines header 1 to header 6.
<code><head></code>		Defines information about the document.
<code><header></code>		Defines a header for a section or page.
<code><hgroup></code>		Defines information about a section in a document.
<code><hr></code>		Defines a horizontal rule.
<code><html></code>		Defines an HTML document.
<code><i></code>		Defines italic text.
<code><iframe></code>		Defines an inline sub window (inline frame).
<code></code>		Defines an image.
<code><input></code>		Defines an input field.
<code><ins></code>		Defines inserted text.
<code><keygen></code>	New in HTML 5.	Defines a generated key in a form.
<code><kbd></code>		Defines keyboard text.
<code><label></code>		Defines a label for a form control.
<code><legend></code>		Defines a title in a fieldset.
<code></code>		Defines a list item.
<code><link></code>		Defines a resource reference.
<code><map></code>		Defines an image map.
<code><mark></code>		Defines marked text.
<code><menu></code>		Defines a menu list.
<code><meta></code>		Defines meta information.
<code><meter></code>		Defines measurement within a predefined range.
<code><nav></code>		Defines navigation links
<code><noframes></code>	Not supported in HTML 5.	Deprecated; see <code><frame></code> and <code><frameset></code> .
<code><noscript></code>		Defines a noscript section.

<code><object></code>		Defines an embedded object.
<code></code>		Defines an ordered list.
<code><optgroup></code>		Defines an option group.
<code><option></code>		Defines an option in a drop-down list.
<code><output></code>	New in HTML 5.	Defines some types of output.
<code><p></code>		Defines a paragraph.
<code><param></code>		Defines a parameter for an object.
<code><pre></code>		Defines preformatted text.
<code><progress></code>		Defines progress of a task of any kind.
<code><q></code>		Defines a short quotation.
<code><rp></code>		Used in Ruby annotations to define what to show browsers that do not support the Ruby element.
<code><rt></code>		Defines explanation to ruby annotations.
<code><ruby></code>		Defines ruby annotations
<code><s></code>		Defines text that is no longer correct
<code><samp></code>		Defines sample computer code
<code><script></code>		Defines a script
<code><section></code>	New in HTML 5.	Defines a section
<code><select></code>		Defines a selectable list.
<code><small></code>		Defines small text.
<code><source></code>		Defines media resources.
<code></code>		Defines a section in a document.
<code><strike></code>	Not supported in HTML 5	Use CSS instead.
<code></code>		Defines strong text.
<code><style></code>		Defines a style definition.
<code><sub></code>		Defines subscripted text.
<code><summary></code>		Defines the header of a “detail” element.
<code><sup></code>		Defines superscripted text.
<code><table></code>		Defines a table.

<code><tbody></code>		Defines a table body.
<code><td></code>		Defines a table cell.
<code><textarea></code>		Defines a text area.
<code><tfoot></code>		Defines a table footer.
<code><th></code>		Defines a table header.
<code><thead></code>		Defines a table header.
<code><time></code>		Defines a date/time.
<code><title></code>		Defines the document title.
<code><tr></code>		Defines a table row.
<code><tt></code>	Not supported in HTML 5.	Use CSS to style elements.
<code><u></code>	Not supported in HTML 5.	Use CSS instead.
<code></code>		Defines an unordered list.
<code><var></code>		Defines a variable.
<code><video></code>		Defines a video.
<code><wbr></code>		Defines a possible line-break.
<code><xmp></code>	Not supported in HTML 5.	Use the <code><pre></code> tag instead.
